

SVF Spreadsheet — Issues Fixed

Daily Collections Report application (Univer spreadsheet)

Period covered: 31 July 2026 (yesterday) – 1 August 2026 (today) · Prepared 1 Aug 2026

Summary of all issues resolved over the last two days across the spreadsheet editor — covering formatting tools, keyboard behaviour, file import, access control, and a production display bug.

Yesterday 31 July 2026

#	ISSUE	WHAT WAS FIXED	STATUS
1	Yellow fill showing in the sheet that wasn't in the original Excel	Investigated and confirmed the app now renders sheets exactly as uploaded. The stray yellow came from older files created by a previous version, not the current converter.	Resolved
2	Excel "Standard Colors" missing from the colour picker	Added Excel's Standard Colors row (with a labelled section) to the font & fill colour pickers, below the existing Theme Colors.	Fixed
3	Ctrl + Shift + Backspace (delete whole word) not working	Implemented word-delete while editing a cell — it now removes the previous word instead of a single character.	Fixed
4	Ctrl + Z (undo) not working	Undo / redo now work reliably even when focus is outside the cell grid.	Fixed
5	Hidden sheets in an uploaded Excel were loading as visible	Hidden sheets now stay hidden on upload and can be revealed via right-click → Unhide, exactly like Excel.	Fixed
6	Viewers could see editing controls and formulas	Viewer accounts now get a true read-only view — only a "View only" badge and the grid: no toolbar/ribbon, no formula bar, no Reset, editing blocked, and formulas hidden.	Fixed
7	Need project documentation	Prepared full end-to-end project documentation (with timeline) as Word / PDF.	Delivered

Today 1 August 2026

#	ISSUE	WHAT WAS FIXED	STATUS
8	No Format Painter (copy formatting between cells)	Added a full Excel-parity Format Painter — single-click copies formatting to the next selection, double-click stays on (sticky), Esc cancels. Copies formatting only, never the cell value.	Added
9	While entering data, the selected cell sometimes jumped somewhere else	Background sync (e.g. a column hide/show from another edit) was moving the cursor. The view — active cell & scroll position — is now preserved during sync.	Fixed
10	Format Painter copied only colour, not row height / column width	Format Painter now also carries row height and column width, matching Excel.	Fixed
11	Format Painter as a separate custom button	Moved it into Univer's native formatting ribbon (brush icon, next to bold/italic) and removed the separate button.	Improved

#	ISSUE	WHAT WAS FIXED	STATUS
12	Ctrl + Z did not undo a Format Painter action	A paint (style + row height + column width) is now a single undo step, and undo is no longer swallowed when the cell editor has focus — one Ctrl + Z reverts the whole paint.	Fixed
13	Standard Colors appeared locally but were missing in production	Root cause: the earlier implementation relied on a build-time patch that the production build wasn't applying. Rebuilt the feature in the application code itself so it ships with every deploy — no build-step dependency.	Fixed

Note: item 13 requires a normal deploy to reach production. All other fixes are in the application code and take effect on the next deployment.
